Company Overview

ASML Holding NV (AMS: ASML)

COMPANY DESCRIPTION

Founded in 1984 in Eindhoven, Netherlands, ASML is the world's leading supplier of photolithography systems used in the manufacturing of semiconductors

Only company in the world capable of manufacturing Extreme Ultraviolet (EUV) lithography machines required to produce sub 2 and 7 nm nodes key for its global customers including TSMS, Samsung and Intel.

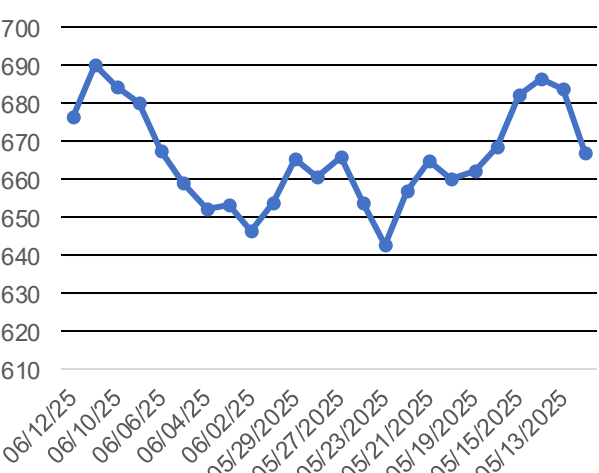

To produce these machines, they have an effectively exclusive supply of irreplaceable components from Carl Zeiss, Trumpf, and Cymer.

They are also the leading supplier of Deep Ultraviolet lithography machines, used to produce larger node chips for less complex tasks.

KEY FINANCIALS

Ticker	ASML
Share Price	€676.60
52 Week High / Low	€1,110.09 / €578.51
Beta (5Y Monthly)	1.22
Enterprise Value	€304.17B

EV / EBITDA	23.13x
P / E (TTM)	31.04x

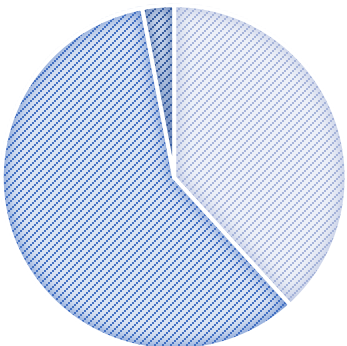

52 WEEK PERFORMANCE

REVENUE BREAKDOWN

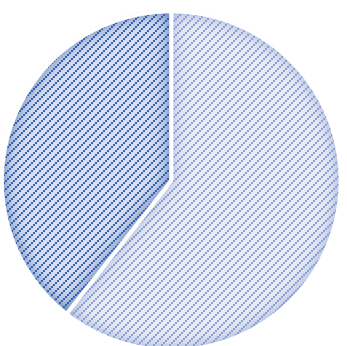

BY TECHNOLOGY

■ EUV ■ DUV ■ Metrology & Inspection

BY END-USER

■ Logic ■ Memory

Revenue Breakdown Takeaways:

DUV forms 64.15% of sales volume down 2% YoY in terms of contribution to total sales volume.

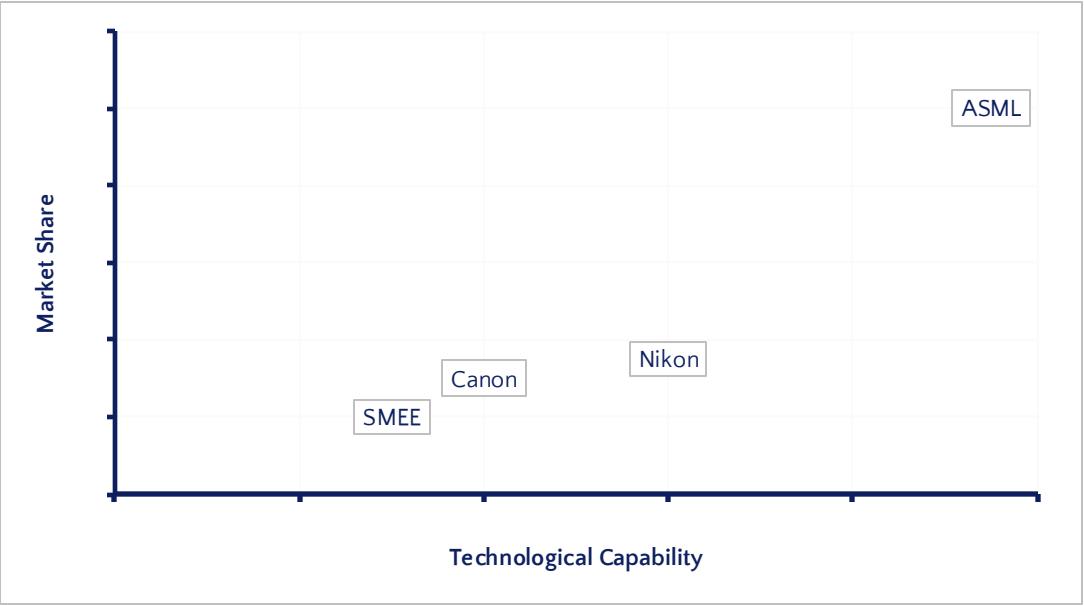

EUV contributes over 38.23% of the total €21.77B revenue generated in 2024, despite only forming 7.55% of the sales volume in terms of units.

These EUV and DUV Lithography Machines are primarily purchased Logic, highlighting industrywide investment in CPUs and GPUs needed for AI, while demand for DRAM/ NAND lagged in 2024 despite sales being up 24% YoY

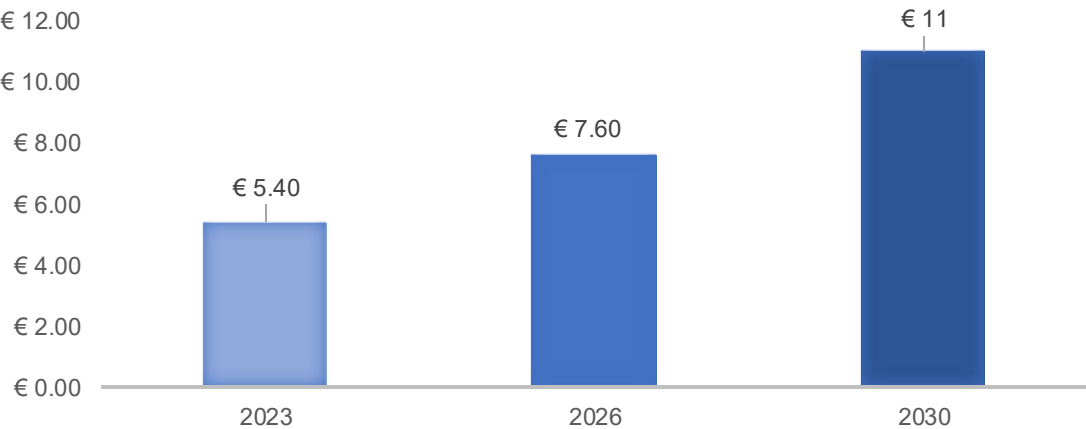

ASML operates in the semiconductor capital equipment industry, creating photolithography machines, essential for printing transistor patterns onto silicon wafers that then for the CPUs, GPUs and storage used in computers.

The Semiconductor industry is poised to be a trillion-dollar industry by 2030 driven by AI, EV, and computing demand, with annual revenue growth in the sector predicted to be 6-8% (McKinsey, 2022).

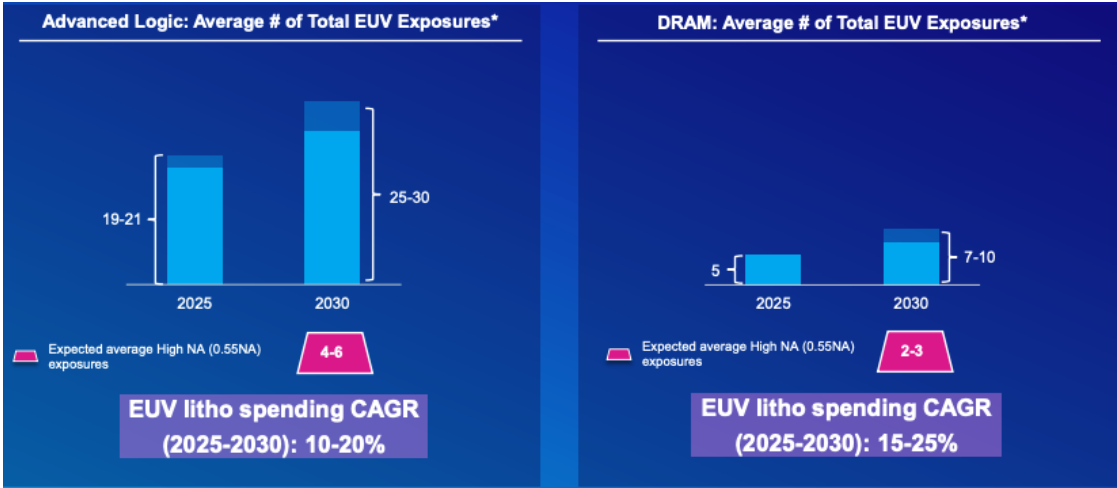

GLOBAL COMPETITION

TAM GROWTH (values in billions of €s)

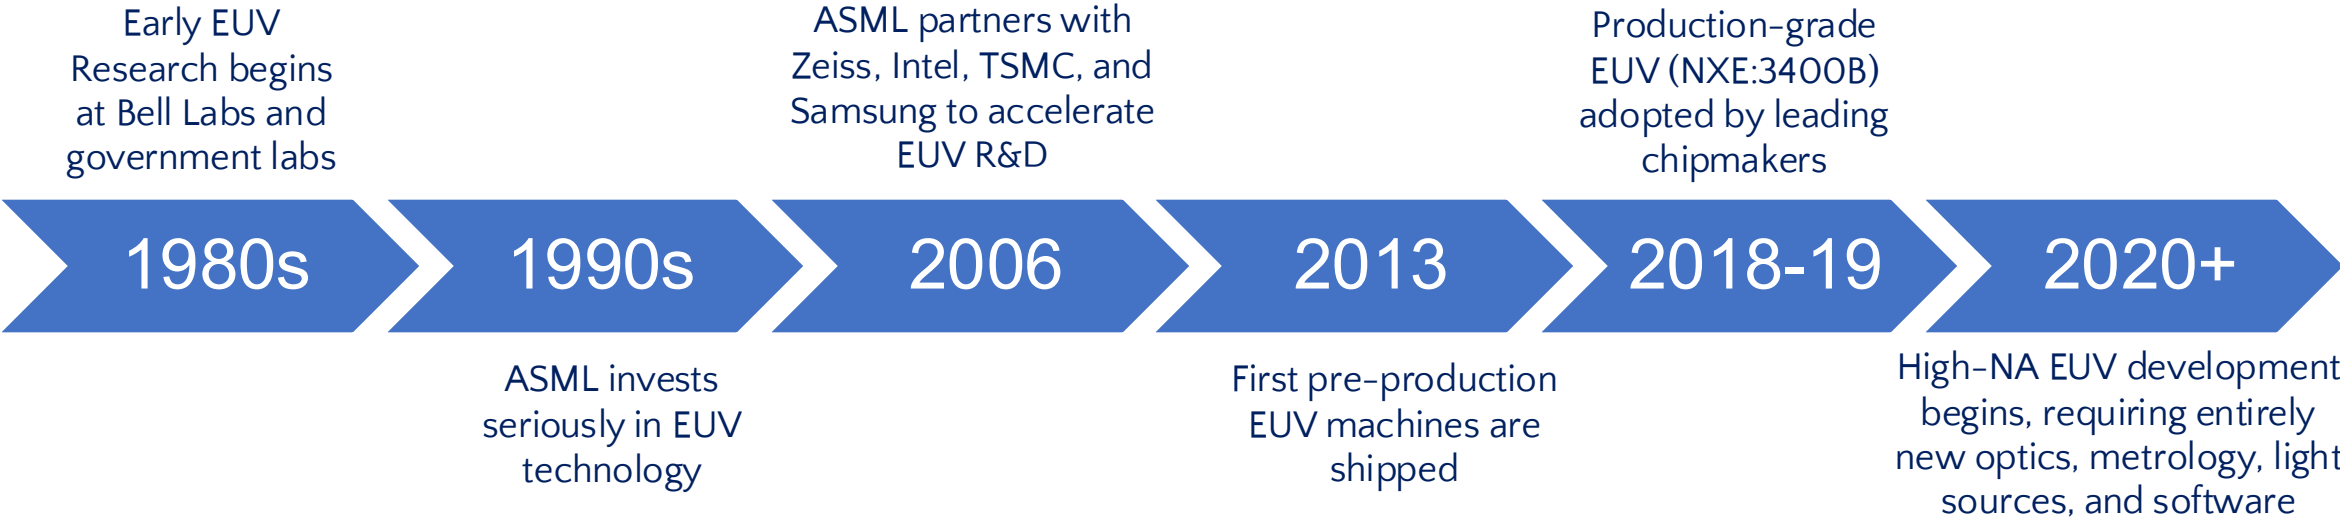

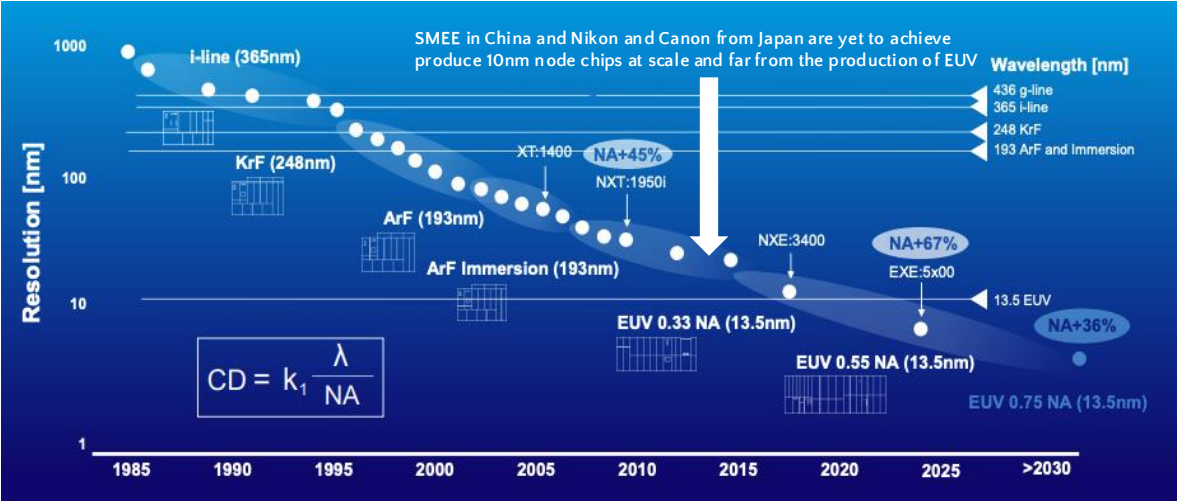

PROJECTD EUV SPENDING GROWTH

Unmatched Advantage in Technology

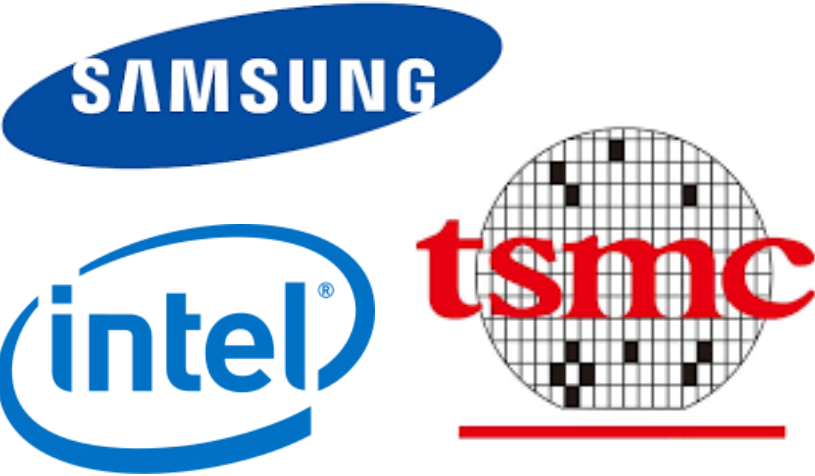

- Sole producer of High-NA EUV lithography systems – frontier of semiconductor manufacturing
- Enables chipmakers to print **smaller features** with **greater precision**
- Requires ~100,000 parts from 5,000 suppliers
- ASML has proprietary knowledge on how to align, calibrate, and operate this system reliably
- Nobody else has rights or technical capacity to replicate the EUV optics chain

Mispricing Risk from Global Competitors

Technological companies dependent on ASML

Biggest customers – most advanced semiconductor foundries

- Guaranteed early High-NA revenue, accelerating return on R&D
- Very high **co-development** and roadmap **co-planning**
- Complexity & criticality of machines make it tough to switch vendors

Cost of High-NA EUV machines

High investment = high commitment

Since customers are already placing so many orders, they are committed to ASML's ecosystem, creating strong **vendor lock-in** and **switching costs**

Undervaluation of the High BACKLOG

Market

Too focused on falling quarterly results

Our Insight

Backlog worth **€36 billion**

- Shows structural demand for next-gen semiconductors
- Provides strong revenue visibility into the future

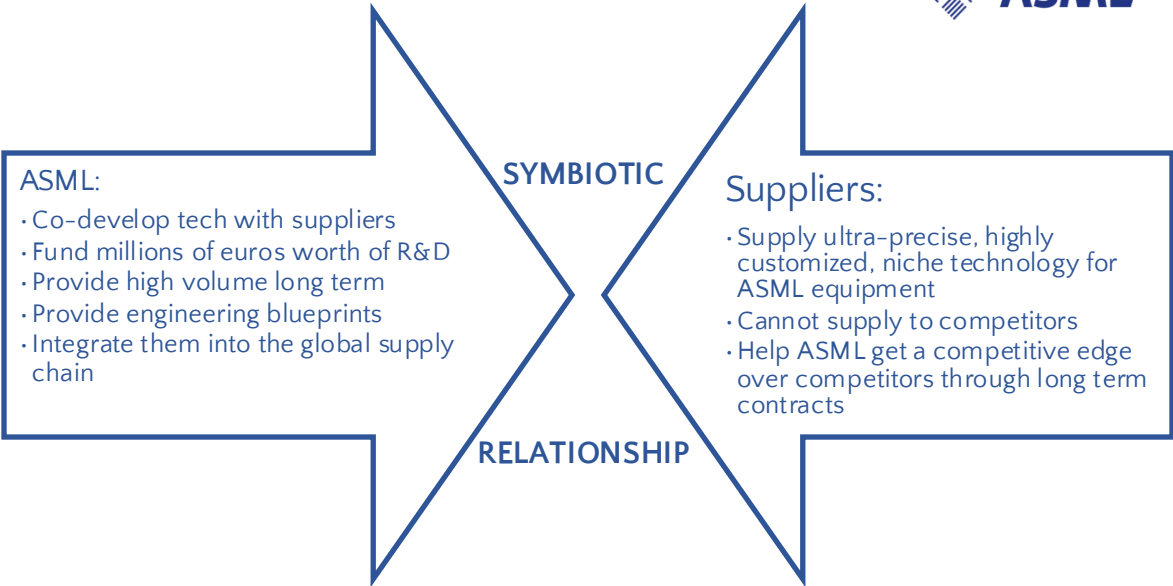

High margin revenue beyond just selling the system:

- Continuous & compounding service revenue
- System upgrades and refurbishments
- A built-in sales channel for software and computational lithography enhancements

Investment Thesis III: Supplier Ecosystem Lock-In

Strong supplier partnership
EXCLUSIVE SUPPLIER NETWORK

Trumpf	- Supplies laser light systems - Trumpf and ASML co-developed this over 15 years - Trumpf's systems can't be sourced independently for competitors - Only works with Cymer ignition (ASML subsidiary)
Carl Zeiss SMT	- Exclusive partnership with ASML - Only company to make ultra precise High-NA reflective optics - Worked together for decades to achieve this engineering feat
Cymer	- Subsidiary company - EUV light source - Single source and tailor made for ASML - Works only with Trumpf optics
VDL ETF	- Provide precision mechatronics - Ultra fast mechanical system for atomic level accuracy when moving the delicate wafers - Only works with ASML machines
ASML themselves	- Custom build 100,000+ parts in house with 2nm margin of error with no open market alternatives or use cases.

TECHNOLOGY MONOPOLY + COMPONENT MONOPSONY

Sole buyer of 80,000+ nonmarket, custom-built parts useless outside ASML ecosystem
Closed and contractual, supply agreements guarded by strict NDAs, exclusivity clauses and IPA control
Strategic ancillary market control- uses pricing and demand power to deliberately keep subsectors small and single firmed

Risks, Mitigants, & Catalysts

Mitigated Risks and Attractive Catalysts Will Ensure Stable Growth Well Into The Future

Risks

Geopolitical & Regulatory Exposure

China export bans, U.S. subsystem reliance, and Taiwan/South Korea revenue concentration heighten ASML’s exposure to compliance risk and supply disruptions.

Customer Concentration & CapEx Volatility

ASML derives 65–70% of revenue from TSMC, Samsung, and Intel, exposing it to fab delays, CapEx cuts, and industry cycles that drive order slowdowns and earnings volatility.

Lead Time Rigidity & Capacity Mismatch

ASML’s 12–18 month lead times, low real-time demand visibility, and slow capacity scaling limit its ability to adjust to fab shifts, risking missed growth and production mismatches.

Mitigants

Navigating Geopolitical and Regulatory Risk

Engage with key authorities, strengthen compliance, plan for geopolitical risks, diversify customers, localize operations, and manage export licenses proactively.

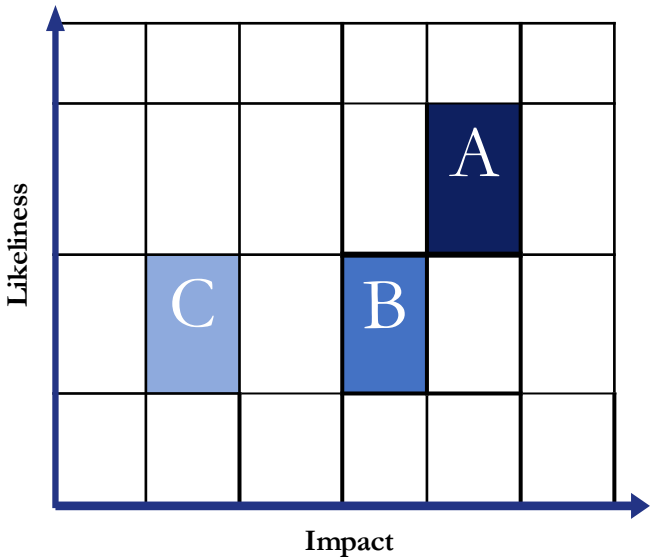

Managing Customer Dependence & Demand Volatility

Secure long-term agreements, deepen ecosystem ties for CapEx visibility, plan for downturns, and maintain cost and financial flexibility to manage demand swings.

Enhancing Flexibility & Capacity Resilience

Expand manufacturing and supply chain capacity, maintain flexible operations and protect growth through IP management and component security.

Catalyst

High-NA EUV Commercial Ramp:

Early adoption success of ASML’s €300M+ High-NA EUV tools at Intel and TSMC would validate performance and pricing, unlock a new multi-year growth leg and reinforcing technological leadership.

Upside Surprise in Net Bookings:

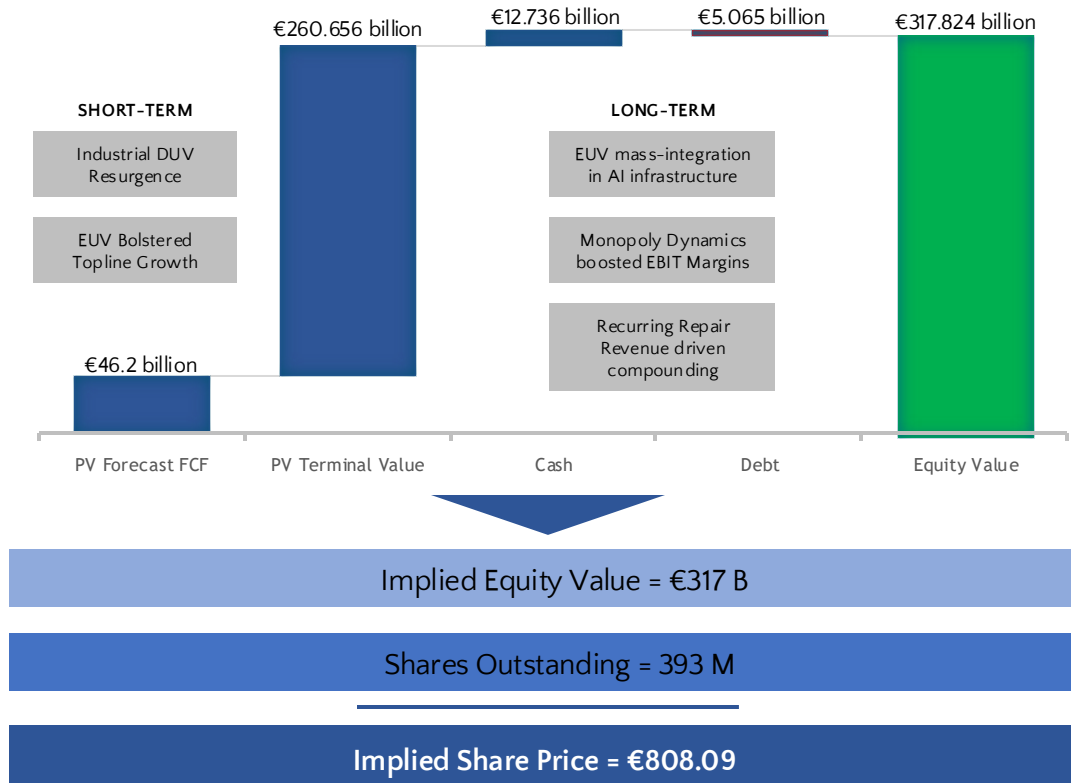

A rebound in net bookings to €5B+ would signal strengthening fab demand, providing forward visibility into revenue growth driven by AI, High-NA, and DUV orders.

AI-Driven Semiconductor CapEx Expansion:

Surging AI-related fab investments globally supported by government incentives would boost ASML’s tool backlog and service revenue, reinforcing long-term demand for EUV and DUV systems.

Recommendation: Buy

Competitive Differentiation:

ASML's 5,000+ patent portfolio, sole ownership of High-NA EUV lithography, and multi-decade R&D lead make it technologically untouchable, with no viable competitors even remotely close.

With a \$36B order backlog, irreplaceable machines central to national security interests, and a razor-and-blade business model, ASML enjoys high-margin recurring revenue and customer stickiness that amplifies over time.

ASML's exclusive, co-engineered partnerships, most notably with Zeiss, form a hyperspecialized and interdependent supplier network that would take competitors years and billions to replicate, if possible.

Company	Tech Capability	Market Share	Justification
ASML	9.5	10	Only EUV/High-NA player, technologically 10 years ahead of competition. Has successfully commercialized EUV lithography machines. Market leader for EUV and DUV lithography. Controls 85% of global lithography equipment revenue.
Canon	4	3	Only produce nanoimprint lithography technology and some KrF/ArF dry DUV system, giving them limited relevance in advanced nodes. Serves a niche market with no top fab adoption. No EUV technological capabilities. Market share in the lithography market is less than 10%.
Nikon	6	3.5	Produce DUV immersion system, which were ideal for 10nm to 28nm nodes, however now they have lost relevance and sales are limited to Chinese and memory fabs. Have lost Intel, TSMC, and Samsung from its key customer base to ASML. Losing market share over time.
SMEE	3	2	Despite state-backing they can only produce DUV dry scanners, with no EUV production in sight. Only operate in China for 28nm and higher nodes and lost access to ASML subcomponents because of sanctions. Not commercial competitive at a high end and yet to reach close to sub 10nm nodes.
